

JACK IRVINE ✕
DESIGN PORTFOLIO

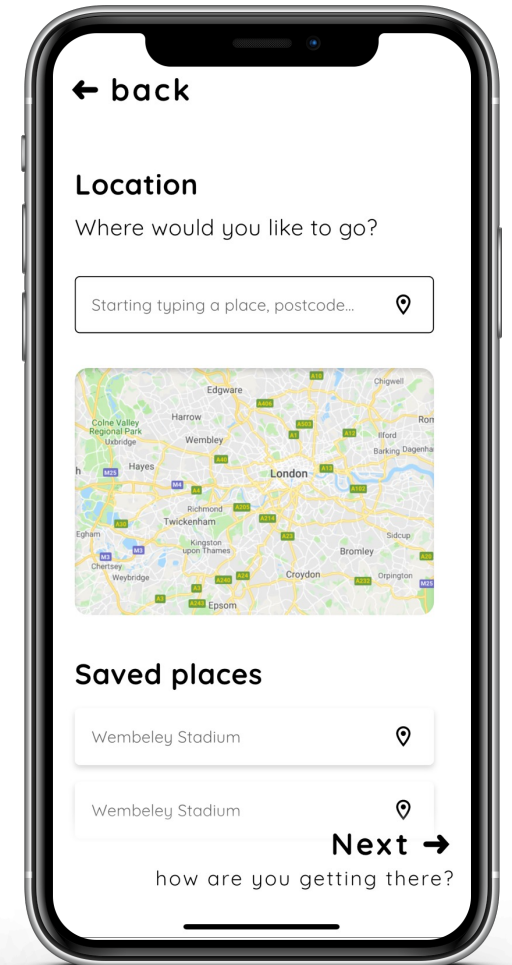

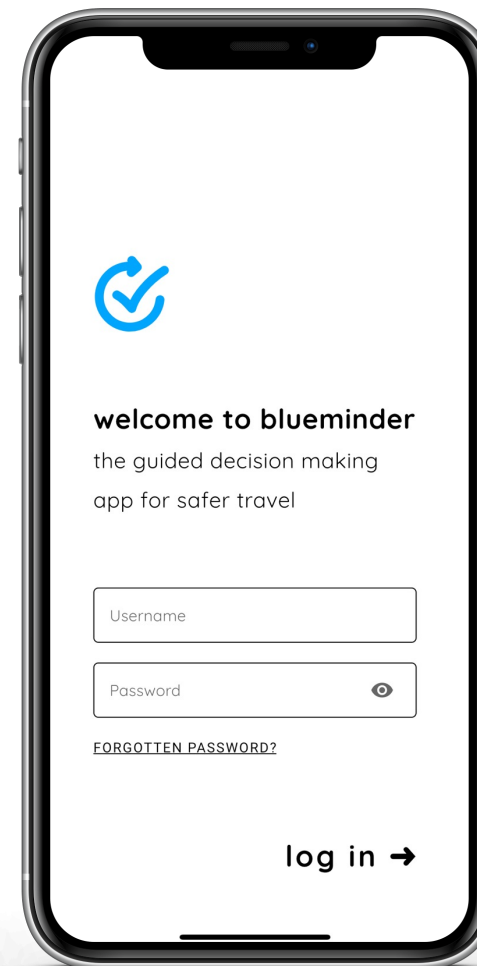

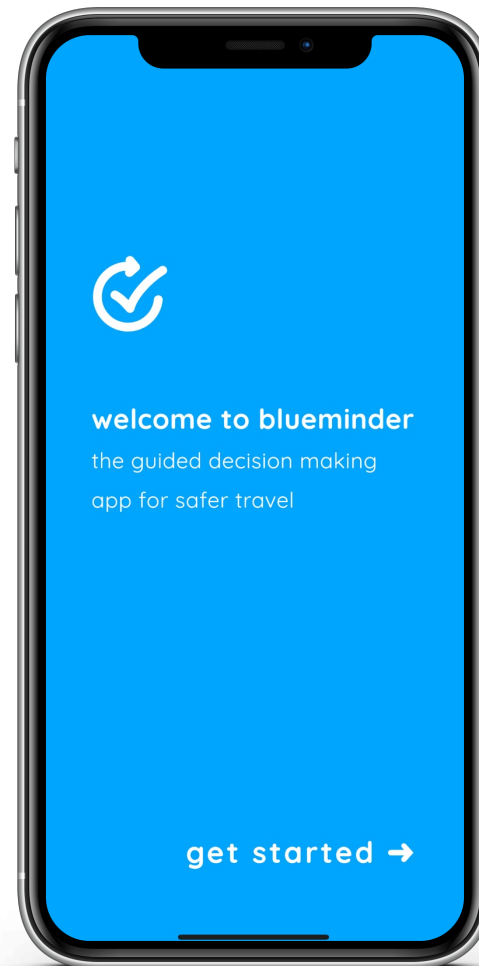

Having spent the first COVID-19 lockdown learning cross platform app development. I volunteered to design and develop a Shetland Dictionary app for local charity Shetland ForWirds to digitise and preserve 3000 word definitions.

The app is designed for use by the elderly, with options to increase font size and read pronunciations aloud.

As a director of Potential Innovations, my main responsibilities are the design and technical implementation of our primary software offering, blueplan.

I use surveys and AB testing to ensure our software is accessible and that we are focusing on features with the greatest direct benefit to our users.

potential innovations is a new company
exploring solutions to help young people
reach their full potential.

In Summer 2020, I joined a small software company to assist in the redesign of legacy features built on the .NET framework and transitioning them to a cross platform Material app based in Flutter.

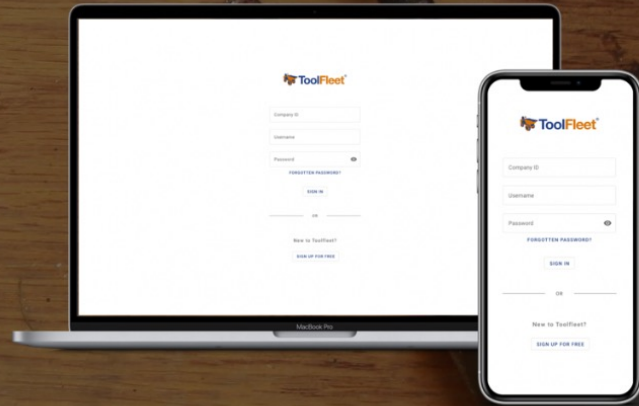

During this time, I was commended for my application of UI research to redesign features based on customer usage patterns, and a new website built in WordPress to support their latest project.

I spent some of my spare time designing a new concept logo for GroundLeader based on the existing ToolFleet brand (bottom left).

Schedule maintenance online

Toolfleet is the online organiser for inspections, servicing and repairs.

Why choose Toolfleet

I've designed several logos for small projects, apps, societies and university projects.

Pomo – a time management app based on the pomodoro technique

LockED – a student robotics project based on an automatic facial recognition locker

AlgoSig – an algorithmic trading society at my university

Shetland Gift Co. – a Shetland based giftware company

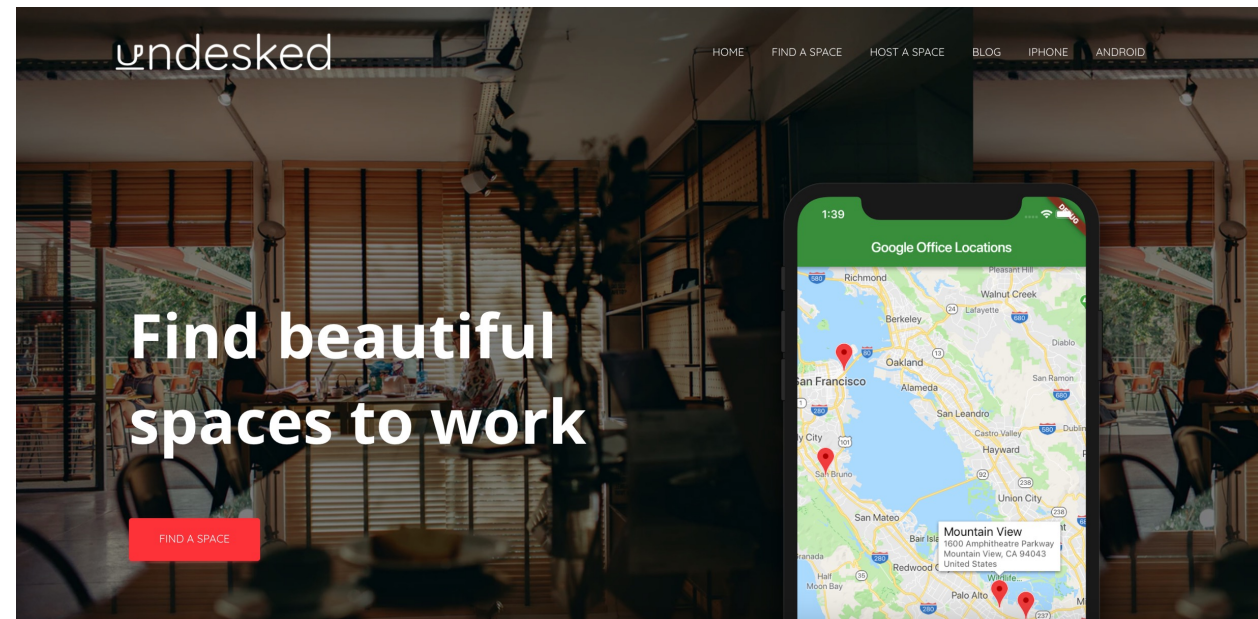

Shetland Gift Co.

Irvine Film – a brand to represent my filmmaking work

undesked

Undesked started as a side project to connect small service industry businesses with remote workers and freelancers. The design centered around the spaces that the app is built around, presenting simple yet bold graphics to call attention to key selling points.

My most recent freelance project was the design and development of a new website for Freshsight, a student consultancy at the University of Edinburgh.

I worked closely with the company's marketing team to incorporate their unique personality into the design, focusing on their existing brand, and relationship with the city of Edinburgh.
